WING[™]
FUEL SYSTEMS
With **Westport**[™] Technology

Ford F-59—Commercial stripped chassis

Still, and always, the most reliable natural gas solutions for Ford fleets

Wing Fuel System[™] provides fleets with proven technology from a company that understands green fleets—because we build, operate, and maintain our own. We have engineered, serviced, and installed Ford vehicles' most reliable compressed natural gas (CNG) and bi-fuel engines for over ten years.

We drive green trucks, just like you

Integrating Wing Fuel Systems[™] technology is a combination of engineering excellence and hands-on fleet management expertise you won't find anywhere else. We have inspected, serviced, repaired, and built over 10,000 natural gas systems and currently operate 300 CNG—powered trucks in our transport company. No other technology company owns and operates a fleet using the systems they sell. Engine testing in a lab is one thing, but running your fleet is a superior practice to validate our promise. We buy and use what we sell.

Engineered for performance

- » 7.3 L V8 gaseous prep engine package
- » Stainless steel fuel lines, fittings, and injector rails
- » Bi-fuel, CNG/RNG, Propane or Gasoline
- » 42 or 52 gasoline gallon equivalent (GGE) underbody tank configurations

Backed by quality and service

- » OEM—quality engineering and design
- » EPA certified
- » Wing Fuel System warranty
- » Nationwide network of trained service technicians
